

HCL Atlas

Low-cost, white-labeled email for service providers

Developed with open-source technologies, HCL Atlas is a lightweight, low-cost mail offering with calendar, contacts and file-management features. With low TCO and a modern architecture, HCL Atlas serves as the best candidate for service providers to offer their customers an affordable collaboration solution.

HCL Atlas helps your customers manage daily teamwork and communication, fostering employee engagement and collaboration, while allowing teams to focus on what matters most.

Here are the HCL Atlas features and their benefits and values:

Capabilities	Benefits	Business Value
Low TCO footprint with high scalability.	TCO footprint is greatly reduced by microservices architecture and simplified mail inbound flow.	Speed less for your server and hosting — even if you have hundreds of thousands of users.
Flexible deployment options with built-in multi-tenant capability.	Deploy in any environment, with no server configuration necessary, manage user access and account with a rich API admin panel.	Easy maintenance. Onboard customers more easily and with fewer resources — saving time and money.
Easy integration with third-party solutions using Rest API endpoints.	Service providers can add Atlas as a value-add feature to existing offerings.	Preserve the value of existing investments and explore new business opportunities for the bundled offerings.
White label at an organizational level, using simple CSS, HTML, and JavaScript for UI customization.	Organizations can have an email experience that matches the look and feel of their brand.	Service providers can easily set up customized, branded email solutions, based on different business needs.

We are investing in HCL Atlas because we are invested in you and your success. Join us on our journey into the future of customer productivity and collaboration solutions. Learn more and try HCL Atlas 2.0
